"Inoculators are spreading delta infections and vaccines are no longer functioning.": The Washington Post publishes internal CDC material. In the future, it seems inevitable that infection explosions between vaccinated people will become uncontrolled in various countries around the world.Posted: August 1, 2021

<https://indeep.jp/the-corona-vaccine-is-not-working-already/>

For example, recent data from the CDC (American Center for Disease Control and Prevention) show that "the majority of new infections are vaccinated," according to the Massachusetts survey. It has been shown that 75% of new infections are those who have been vaccinated with the corona vaccine. "

Caution author is not licensed expert on immunology,

In my past learning on elementary immunology,ADE is defined as follows.

Virus are caught by **antibody**(generated by vaccine) to intercept onset,however evil virus(caused by incomplete vaccine)escape from **final disposing by immune cells**,but eat and proliferate in immune cells,which is to cause their damage<**cytothic**→**no symptom at 1st**>.Thus it is not that immune cells are not instantly killed by the **Trojan virus**(deceiving entry). But the long time accumulation(**incubatio period**) of the damage is to cause **immune system failure at last**.For an example,the period AIDS(HIV)is told several years long.Thus, Covid incubation time is verly short.In my observation on web,antivaccine writers recommend the DRUG=HCQ(hydroxychloroquine) and Ivermectine.
